

You receive TOTAL PERFORMANCE from ULTRA STEEL.

A door is more than an entrance into a home. Your entry way should project a distinct personality of its own. Ultra Steel doors will do that and more. Ultra Steel thermal entry doors offer an outstanding combination of energy savings, security, durability, beauty and low maintenance.

With Ultra Steel you get:

Security

Whether front entrance, garage, side door or rear service door, all of your entrance doors need to be strong and secure. They should be a deterrent to unwanted intruders.

Durability

Your investment in a new entrance door should be a lasting investment. Ultra Steel is backed by the strongest warranty in the industry.

Energy Efficiency

Ultra Steel provides a true thermal barrier which minimizes heat gain in the summer and wards off the cold in the winter. Your home will be more comfortable year round.

True Thermal Break

Style & Beauty

Ultra Steel will enhance the appearance and value of your home. The pages which follow give you a myriad of beautiful choices so that you can design the entrance door of your dreams.

**When the question is:
What door is beautiful and energy efficient, secure and durable?
THE ANSWER IS ULTRA STEEL!**

ULTRA STEEL Security & Durability

Two-thirds of all illegal entries are made through doors. That is a fact that we haven't ignored and that is why we've designed our steel-edged door to offer improved security over traditional wood edge steel doors.

A strike of 100 lbs. broke the wood-edge stile and opened the door.

To open the steel-edged door it required 7 strikes of 100 lbs. of pressure.

Certified Commercial Grade Quality and Performance

Our steel doors meet or exceed all industry performance tests. Our door has been independently tested and passed a Class "B" 90-minute commercial fire test when hung in a fire-rated steel frame. True commercial grade quality, performance-tested and certified.

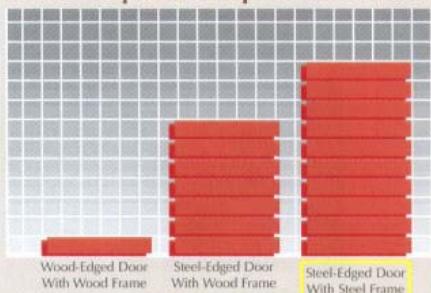

Outstanding Warranties Underwrite Durable Construction.

We offer a lifetime limited warranty valid from date of installation, and can be transferred to a new owner if your home is sold. Ask your dealer for full details.

Lifetime Limited Warranty*

* All insulated door lites are warranted for 10 years from date of installation.

Strikes Required To Open Locked Door

Testing Proves the Strength of Steel

It has been said that actions speak louder than words. We decided it just wasn't good enough to simply say that Ultra Steel doors were more secure. We tested them to prove it and the results of our tests were overwhelming.

Ultra Steel doors out perform wood edge steel doors by a 7-to-1 margin. Even greater security is added when our steel replacement frame is utilized with Ultra Steel doors.

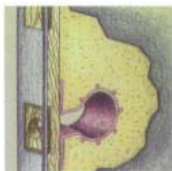

The added time required to attain illegal entry through an Ultra Steel door system is often enough to discourage perpetrators. They will often look for less protected targets.

Rigid Steel Skin

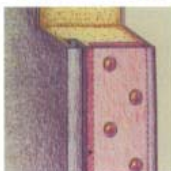

Our 24-gauge steel skins resist denting, cracking, and splitting.

Reinforced Lockset Preparation

Provides a rigid base for locksets, and helps discourage intruders.

Steel Hinge Reinforcement

The 12-gauge plate inside each door adds extra strength to the hinge area. Hinges are applied with machine screws for a more positive anchor.

Optional Replacement Steel Frame

Heavy gauge steel replacement frame fits into your existing jamb and provides for even greater security.

ULTRA STEEL Energy Efficiency, Style and Beauty

Galvanized steel skins and an electrostatically applied primer combine to provide an excellent, corrosion resistant base which is ready for easy final finishing on the job site, or can be factory finished in a wide variety of colors.

Our steel doors provide the kind of energy efficiency that can really contribute to lower home heating and cooling costs. Each door carries an R-15 insulating value. That's five times better than wood doors and up to twice the R-value of many competitive regular steel doors.

Polyurethane Core

Our solid polyurethane core provides an R-15 insulating value for energy efficiency that far exceeds wood doors.

Perimeter Weather-stripping

Compression

Magnetic

A continuous strip of compression foam or magnetic weather-stripping seals the top and sides of the door with the frame, virtually eliminating air loss around the door.

True Thermal Break

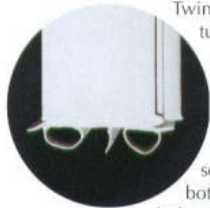

True thermal break edge made of heavy vinyl stops outside temperature penetration, and prevents condensation and thermal bowing which can occur in doors without a thermal break.

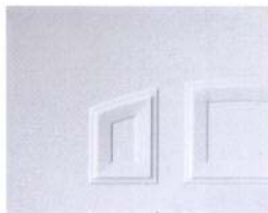

Choose From Our Exclusive Oakgrain or Traditional Smooth Steel Skins.

Ultra Steel doors are available with smooth steel skins or with a deep oakgrain pattern which is stainable in all five different door panel styles. These five different door panel styles in two different steel skins, can be combined with hundreds of lite kit (glass) options to give you thousands of possible combinations. Your door can be factory finished in a choice of sixteen different colors and four different stain options (oakgrain only). With Ultra Steel you can customize the style and color you want.

Triple Contact Bottom Sweep With Drip Cap

Twin compression tubes and an extruded vinyl sweep-blade mate with the threshold triple-tight to seal the door bottom. No leaks, drafts or ice build-up.
